**"Human and Nature: Economies of Density and Conservation in the Amazon Rainforest"**(with Mari Tanaka and Yoshito Takasaki) **Job Market Paper**

Conserving tropical forests impacts the standard of living of local populations. Moreover, human adaptation through sectoral or spatial reallocation of economic activity may undermine conservation policy goals. To derive policies that balance human and ecological well-being, this paper estimates a multi-sector spatial model that formalizes human-nature interactions using high-resolution georeferenced data from roadless river basins in the Peruvian Amazon. Identification comes from plausibly exogenous variation in the structure of river networks. We find that the agglomeration externality in agricultural production outweighs dispersion forces in access to land, implying that higher concentration leads to higher productivity with less deforestation per farmer. We also find a strong congestion externality with spatial spillovers in natural resource extraction. The estimated agglomeration externality, primarily driven by economies of scale in transport

technology and agricultural intensification, generates large welfare and forest cover gains but leads to natural resource depletion through general equilibrium effects. Counterfactuals demonstrate that combining well-targeted place-based protection policies and transport infrastructure can simultaneously achieve higher welfare, lower deforestation, and less natural resource depletion.

### **“The Golden City on the Edge: Economic Geography and Jihad over Centuries”**

(with Masahiro Kubo) *Hayami Award 2022*

This paper uncovers the evolution of cities and Islamist insurgencies, so called *jihad*, in the process of the reversal of fortune over the centuries. In West Africa, water access in ancient periods predicts the locations of the core cities of inland trade routes—the trans-Saharan caravan routes—founded up to the 1800s, when historical Islamic states played significant economic roles before European colonization. In contrast, ancient water access does not have a persistent influence on contemporary city formation and economic activities. After European colonization and the invention of modern trading technologies, along with the constant shrinking of water sources, landlocked pre-colonial core cities contracted. Employing an instrumental variable strategy, we show that these deserted locations have today been replaced by battlefields for jihadist organizations. We argue that the power relations between Islamic states and the European military during the 19th century colonial era shaped the persistence of jihadist ideology as a legacy of colonization. Investigations into religious ideology related to jihadism, using individual-level surveys from Muslims, support this mechanism. The concentration of jihadist violence in “past-core-and-present-periphery” areas in West Africa is consistent with a global-scale phenomenon.

### **Tsuda, Shunsuke. “Refugee inflows, surplus farm labor, and crop marketization in rural Africa.”**

*Journal of Development Economics*, Volume 155, March 2022, 102805

This paper sheds light on the structure of factor and output market frictions to investigate long-term effects of refugee inflows on host farmers. Combining a canonical agricultural household model, the natural experimental setting of mass refugee inflows into Tanzania in the early 1990s, and longitudinal panel data from the host economy, I show that refugee inflows cause market-specific gains and losses. Refugee inflows tighten the off-farm labor market participation constraint, implying an increase in surplus farm labor and labor market inefficiency. On the other hand, I observe a positive impact on the transition from subsistence to crop marketization. This transition is revealed to be primarily due to a reduction in fixed transaction costs around refugee camps, not due to an increase in consumption demand by refugees. While the overall impact on agricultural labor productivity is negative, the “surplus farm labor effect” and the “crop marketization effect” act in opposite directions.

## **Works in Progress**

---

**“De-Radicalization and Reintegration from Violent Extremism.”** (with Robert Blair, Jun Goto, and Yosuke Nagai)

**“Caste Segregation and Spatial Misallocation in Village India”** (with Kazuki Motohashi and Mike Neubauer)

**“The Economics of Subsistence in Africa.”** *S4 Graduate Student Paper Prize 2020, the 2nd place*

## **Professional Activities**

---

### **Referee**

*Journal of Development Economics*, *Journal of Urban Economics*

### **Presentations**

- 2023 European Meeting of the Urban Economics Association (Bocconi); LSE Environment Day; Occasional Workshop in Environmental and Resource Economics (UCSB); 5th JADE Conference (U-Tokyo); ASREC Conference (Harvard); University of Essex; Kyoto Institute of Economic Research; Osaka University; University of Hong Kong; Young Urban Economist Workshop (World Bank)
- 2022 Y-RISE Conference (Kingston); Hitotsubashi University; University of Georgia; GSE-OSIPP-ISER Joint Conference (Osaka); IRES Workshop (Chapman)\*; Growth Lab (Brown)\*; Applied Micro Breakfast (Brown); Applied Micro Lunch (Brown, twice); 4th JADE Conference (Virtual)\*

2021	Applied Micro Breakfast (Brown); Applied Micro Lunch (Brown)
2020	NEUDC (Dartmouth, Virtual); Working Group in African Political Economy (WGAPE) Annual Meeting (Virtual); Research Conference on Forced Displacement (UN City, Copenhagen); Kobe Development Economics and Economic History Seminar (Kobe-DEEH)
2019	Applied Micro Lunch (Brown, twice)
2018	North East Universities Development Consortium (NEUDC, Cornell)
2016	Hitotsubashi Summer Institute; JEA meeting (Nagoya-U); Microeconomics Workshop (U-Tokyo)
