# "Human and Nature: Economies of Density and Conservation in the Amazon Rainforest"

(with Mari Tanaka and Yoshito Takasaki) Job Market Paper

While the conservation of tropical forests is a key element of global efforts to slow climate change and preserve biodiversity, it is unclear how conservation efforts will affect the material standard of living among local populations. We argue that this question turns on the direction and magnitude of agglomeration economies in agricultural production, forest clearing, and natural resource extraction. In particular, this paper builds and estimates a multi-sector spatial model of rainforest communities using detailed georeferenced data from major river basins in the Peruvian Amazon and plausibly exogenous variation in the structure of river networks. We find that the agglomeration externality in agricultural production outweighs dispersion forces in access to land, implying that higher concentration leads to higher productivity with smaller deforestation per farmer. We also find a strong congestion externality with spatial spillovers in natural resource

extraction. The estimated agglomeration externality, which is primarily driven by the economies of scale in transport technology and agricultural intensification, has large impacts on improving welfare and reducing deforestation but leads to natural resource depletion through general equilibrium effects. Counterfactual simulations demonstrate that well-targeted place-based protection policies and river infrastructure investments are complementary to improving human-ecological well-being. While protecting the rural frontier primarily mitigates natural resource depletion, transport infrastructure that integrates hinterlands can reduce deforestation by generating moderate-sized but dispersed settlements and spreading the agglomeration benefits more evenly across the basin.

## "The Golden City on the Edge: Economic Geography and Jihad over Centuries"

(with Masahiro Kubo) Hayami Award 2022

This paper uncovers the evolution of cities and Islamist insurgencies, so called *jihad*, in the process of reversal of fortune over centuries. In West Africa, water access in ancient periods predicts core cities of inland trade routes—the trans-Saharan caravan routes—created up to 1800s, when historical Islamic states played significant roles in economy before European colonization. On the other hand, the ancient water access does not have a persistent influence on contemporary city formation and economic activities. Since European colonization and the invention of modern trading technologies, along with the constant shrinking of water sources, landlocked pre-colonial core cities contracted or became extinct. Employing an instrumental variable strategy, we show that these deserted locations are replaced by battlefields for jihadist organizations today. We argue that the power structure of Islamic states and the European military during the colonial era in the 19th century shapes the persistence of jihadist ideology as a legacy of colonization. Investigation into religious ideology related to jihadism, using individual-level surveys from Muslims, supports this mechanism. The concentration of jihadist violence in 'past-core-and-present-periphery' areas in West Africa is consistent with a global-scale phenomenon.

## Tsuda, Shunsuke. "Refugee inflows, surplus farm labor, and crop marketization in rural Africa." Journal of Development Economics, Volume 155, March 2022, 102805

This paper sheds light on the structure of factor and output market frictions to investigate long-term effects of refugee inflows on host farmers. Combining a canonical agricultural household model, the natural experimental setting of mass refugee inflows into Tanzania in the early 1990s, and longitudinal panel data from the host economy, I show that refugee inflows cause market-specific gains and losses. Refugee inflows tighten the off-farm labor market participation constraint, implying an increase in surplus farm labor and labor market inefficiency. On the other hand, I observe a positive impact on the transition from subsistence to crop marketization. This transition is revealed to be primarily due to a reduction in fixed transaction costs around refugee camps, not due to an increase in consumption demand by refugees. While the overall impact on agricultural labor productivity is negative, the "surplus farm labor effect" and the "crop marketization effect" act in opposite directions.

# Works in Progress

- "De-Radicalization and Reintegration from Violent Extremism." (with Robert Blair, Jun Goto, and Yosuke Nagai)
- "Caste Segregation and Spatial Misalloction in Village India." (with Kazuki Motohashi and Mike Neubauer)
- "The Economics of Subsistence in Africa." S4 Graduate Student Paper Prize 2020, the 2nd place
